

# Odour free exhaust air

– the environmentally friendly way

The solution is here that solves exhaust air cleaning in the food processing industry. Centriair has combined two revolutionary technologies, the patented efficient centrifugal separators for removal of oil mist and other aerosols with the highly performant UV systems to remove oil vapours and submicron particles.

The result is a completely odour free exhaust air.

This is done without filter cleaning or filter replacement and with a minimum of maintenance. The alternatives are space requiring, maintenance demanding or unable to remove odour below correct legislative limits.

#### Advantages with the Centriair solution:

- High cleaning efficiency
- Low running costs
- Minimum maintenance
- Compact solution
- Suitable for large air flows
