

RoboVent PowerPro

Clean and Recycle Contaminated Air from Manual Welding Workstations

The RoboVent PowerPro is a self-contained unit that allows the CrossFlow hood to be placed where needed in the work area. This unit can be ducted or used as stand-alone and located virtually anywhere in the work area without restricting overhead cranes.

Clean the Air and Maintain Plant Flexibility

• **Captures Contaminants at the Source:** Because the CrossFlow capture hood is installed right at the source where air contaminants are created, it effectively removes airborne contaminants before they can settle on floors and walls or become damaging to employees' health. The CrossFlow hood design is widely accepted as the correct way to address manual welding ventilation, and is endorsed by the American Conference of Governmental Industrial Hygienists (ACGIH). It pulls the smoke away from the welder, preventing it from going through his/her helmet.

• **Virtually Eliminate the Risk of Fire:** The proprietary RoboVent SparkOut System is mounted at the inlet of the PowerPro arm, and is designed to greatly reduce the risk of fires in the duct and filtration equipment. It has effectively prevented fires in hundreds of robotic and automatic weld cells since 1996. For additional fire prevention, we also offer the RoboVent Supprex-200 Fire Suppression System, designed to extinguish fires.

• **SafeSensor:** The SafeSensor particulate monitoring system detects a leak past your filters. If a leak occurs, the system shuts the equipment down and sets off an alarm. Keep your people safe!

**PowerPro™
Air Cleaning System**

This system is covered by one or more of the following patents: #6,758,875; #4,610,704 and other patents pending. Due to continued engineering, all specifications are subject to change without notice. ©2008 Great Lakes Air Technologies, Inc.

RoboVent PowerPro

• **Long Filter Life:** RoboVent systems utilize the PowerFlex system, a very powerful self-cleaning system that requires minimal maintenance. Our WeldEx filters are pre-treated with an oil-absorbing, filter-friendly element (pre-coat) and we use pleated filters for high media area and more effective filtration.

• **Preventative Maintenance:** RoboVent offers a comprehensive preventative maintenance program to protect your investment and to ensure that your system operates safely and efficiently. An Extended Warranty is available with purchase of a Great Lakes preventative maintenance program.

• **Installation is Easy:** The WeldPro is a self-contained unit that requires virtually no installation. The unit is simply placed in front of a work area, bench or fixture for a seamless fit into most existing workstations. Various options are available to customize the workstation for any application, and it can also be suspended from the ceiling.

• **Warranty:** All RoboVent equipment carries a warranty for six months parts and labor, five years for all standard components (one year for all optional components), and ten years for the cabinet (see Great Lakes warranty policy for details).

PowerPro™ capture hood in use.

Available Options

- **AutoSaver:** Allows the WeldPro system to automatically turn on when the welder strikes an arc, and turn off after 5 minutes of no operation. Mounts in the standard control panel and senses power usage of the welder.
- **Supprex-200:** The Supprex-200 Fire Suppression System is engineered to our exacting high standards for safety and effectiveness. Supprex is a dual stage system activated by smoke and heat. If heat is detected, FM-200 gas is released to extinguish the fire. With Supprex-200 System there is little or minimal clean-up after a fire.
- **E-Drive:** The E-Drive System uses a sensor to constantly monitor the airflow, and then using a VFD, it automatically adjusts the RPM of the motor to compensate for filter loading. Energy peaks and valleys are evened out, 20% - 30% of energy is saved and filter life is extended as much as 30%. The result is a system that is quieter, operates at maximum operating efficiency and saves you money.
